
Leakage channel	Evaluation that detects it	Mitigation evaluated
Parametric memory the model already knows the book; the input may be prefix-only	Renaming contrast (Sect. 4.2) original vs renamed names, scored at reveal time	Pseudonymise and map back (a trade-off; Sect. 6.5)
Content leakage unread text enters the input (whole-volume card, long context)	Truncate-and-rebuild; suffix canaries (string match)	Prefix-built (versioned) cards; physical truncation
Selection or derivation leakage prefix text is served, but chosen or derived using the suffix	Truncate-and-rebuild; counterfactual suffix (canaries are blind to it)	Evidence-horizon versioning; prefix-decided gate; prefix-causal index
